

November 10, 2010

To Whom It May Concern,

The purpose of this letter is to certify that Anodyne® Therapy Systems, Models 120 and 480 International – are free of lead.

These systems are manufactured in the United States in a manufacturing facility that is compliant with ISO, US FDA, and European Medical Device Directives such as RoHS. The CE Mark for these products is number CE87268.

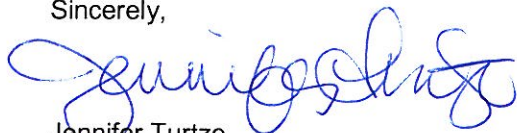

As Anodyne Therapy LLC (the Manufacturer of Anodyne® Therapy Systems) is in compliance with the aforementioned directives, as a result, all devices that are shipped internationally to the European Union are **Lead Free**.

Although it is understood that all medical devices with CE Marks are free of lead – and regulations do not require additional marking – as a manufacturer we have chosen to additionally affix the following sticker on all products that are shipped to Europe.

If there is any question in this matter, please contact Anodyne Therapy LLC directly at +1-813-342-4432.

Sincerely,

Jennifer Turtzo
Product Manager – US and INTL
